

ABSTRACT

A water transportation system and method are described, generally related to
water amusement attractions and rides. Further, the disclosure generally relates to water-
powered rides and to a system and method in which participants may be actively involved
5 in a water attraction. This transportation system comprises at least two water stations and
at least one water channel connecting the at least two water stations for the purpose of
conveying participants between the at least two water stations. In addition, the water
transportation system may include conveyor belt systems and water locks configured to
10 convey participants from a first source of water to a second source of water which may or
may not be at a different elevation.
